about us

We are Spectrum Cleaning Company W.L.L, a family-owned company engaged in the business of waste water removal, sewage services, high pressure cleaning, industrial and commercial cleaning and skip services.

We are a subsidiary of M.M.Kooheji group B.S.C(C), which was established 100 years ago in Bahrain and has diversified interests in trading, manufacturing, real estate and contracting.

Spectrum Cleaning Company W.L.L has been active in the Bahraini market for the last five years providing tanker and sewerage services and already has an established portfolio of clients, including many of the most prestigious and well-known business names in Bahrain.

A message from our Managing Director,
Mr Hisham Al-Kooheji

It is my privilege to have co-founded Spectrum Cleaning Company. W.L.L in 2011 and to have served as its Managing Director since then. As part of the M.M.Kooheji Group of companies, we are part of a long tradition of family business in Bahrain, going back over one hundred years, and this tradition is important to us. We value our traditions, just as we value the ties to our customers, our staff and our community that come from those traditions. We have a commitment to our country and to the values that we hold dear. We incorporate these values into all the businesses in our Group.

In our modern era of continuous consumption, waste management services provide a valuable service to our society. When carried out responsibly, efficiently and with respect for our community and natural environment, waste management enhances everyone's life. It is our vision to become the foremost provider of waste management services in the Gulf region by meeting the needs of our clients, our staff and our community.

Quality of service is paramount to us. Without satisfied customers, no business can survive and we are privileged to serve some of the most prestigious customers in Bahrain. For our part, we provide them with a quality of service that is second to none. We meet our deadlines, we keep our promises and we do this on a daily basis. This relentless commitment to our clients has become our competitive advantage. Our core concern is safety. We want our staff to feel secure in the knowledge that they work for a company that sees their safety as a priority. We have qualified Health & Safety professionals whose role is to ensure that all our processes and procedures meet all applicable regulatory requirements.

We show our commitment to our community not only through the services that we provide but also by respecting our natural environment. As well as meeting all environmental regulatory requirements, we endeavour to provide our services in a way that respects our natural environment and so secures a better future for our children.

Our traditions are important to us but they do not prevent us from embracing the future. On the contrary, they remind us of our core values and that we need to improve constantly to maintain those values. At Spectrum, we incorporate the latest technologies and practices into our operations. Whether it be garbage compacting machines or tyre recycling, we employ the latest technologies to ensure that we provide the best possible service.

SEWERAGE SERVICES

We remove the sludge / drainage water by using 4000 / 8000 gallon Truck tankers

Spectrum Offer Drains and sewage spill clean-up service

Our skilled drain and sewage servicemen operate nationwide and carry-out essential drain and sewage spill clean-up services 24 hours a day. If you have a blocked or overflowing drain Spectrum will unblock and clear-up any spillages quickly and effectively. Our expert drain and sewage spill teams are equipped with the most advanced drain and sewage cleaning equipment and will respond to your call immediately.

SKIP SERVICES

We remove the Normal and chemical waste; Industrial and Commercial waste by using SKIP Bucket along with SKIP TRUCKS

Spectrum Offer Drains and sewage spill clean-up service

Our skilled drain and sewage servicemen operate nationwide and carry-out essential drain and sewage spill clean-up services 24 hours a day. If you have a blocked or overflowing drain Spectrum will unblock and clear-up any spillages quickly and effectively. Our expert drain and sewage spill teams are equipped with the most advanced drain and sewage cleaning equipment and will respond to your call immediately.

JETTING SERVICES

We clear the blockage drainage lines by using Jetting Machines. We have Jetting Tanker / Portable Jetting Machines

Most pipework accumulates silt, scale, debris or other deposits over time and high pressure water jetting is one of the most effective methods of blasting away this drainage problem to leave a clean and efficiently functioning pipe run. For emergency drain clearance or as part of our routine pipe cleaning, Spectrum high pressure water jetting complements its other services to form part of a complete package that can be deployed across your entire property portfolio.

COMPACTOR SERVICES

We remove Bulk Garbage by using compactor trucks.

Spectrum producing sustainable and cost effective solutions for recycling and waste disposal is at the heart of our baler and compactor services. With a team of highly skilled consultants, we work with businesses' up and down the Kingdom of Bahrain to create a greener, more sustainable way of dealing with waste.

WATER SUPPLY

We supply the water and we supply the water for gardens as well.

The services that we provide fall into six broad categories.

Tank Cleaning

We offer a full service, comprehensive industrial cleaning services for tanks, pits and pipes, all in compliance with regulatory requirements. We have the expertise and experience to offer the latest technology for “in-tank” sludge reduction and non-entry cleaning. Chemical residues of whatever nature such as paint, tar, oil deposits and rust can be removed, leaving clean residue-free surfaces.

Drain Sewer Cleaning

We employ a large range of special equipment to carry out industrial cleaning of storm water, sewer, grease, industrial drains and potable water. Our specialised, state-of-the-art equipment removes all kinds of materials such as tree roots, grease, bacterial cultures, deposits, drain skins, sediments, filtrates, incrustations, organic fouling, oxide layers, coating systems, sludge, scale and incrustations from any kind of drain and sewer system.

Sludge Management

One of the most difficult tasks in the oil and gas and petrochemical industries is the separation of sludge into manageable waste streams. We can deploy our proprietary technology to do just that. We can offer a bespoke solution for all kinds of sludge disposal, ultimately disposing of the components safely in landfill or by incineration.

Solid Waste Management

We cater for household, commercial and industrial needs, providing bins and skips of any size. As well as traditional waste containers, we can provide separate containers for different waste streams including domestic waste, paper and card board, wood waste, construction waste, plastics, garden waste, e-waste and metal waste.

Liquid Waste Management

We provide integrated liquid waste management services to appropriately handle liquid and semi-liquid waste streams generated from commercial and industrial units. We ensure the proper treatment at Government-approved treatment plants and its eventual disposal without endangering the environment, all in line with all regulatory requirements.

Non Hazardous Waste

We analyse the elements of our clients processes that generate waste and place bins and skips in the most effective places to ensure ease of access for collection and, where appropriate, re-deployment once the container has been emptied. This makes the process of collection more efficient, thereby saving the client time and money.

Hazardous Waste

We provide integrated hazardous and contaminated waste management services.

Garbage Transportation

Our fleet of garbage collection and compacting vehicles ensures that all garbage is collected swiftly and effectively.

Supply Of Potable Water and TSE Water

We are unique in offering a supply of potable water and Treated Sewage Effluent Water (TSE Water) and can supply these anywhere in Bahrain throughout the year. Our tankers are maintained to the highest standards of hygiene to assure the quality of water.

Road-side Cleaning and Sweeping Services

We deploy heavy duty road sweepers to provide sweeping and cleaning services for road-side and street pavement cleaning. All accumulated sand is disposed at designated landfill areas.

Spill Management

Sometimes, despite your best efforts, spillage occurs. When it does, we can deploy our emergency spill and remediation management teams to minimize the effects and reduce damage to the environment. We keep recovery drums and spill-kits in our waste transportation vehicle, in readiness for any such emergency.

Portacabin and Portable Toilet Supply

We fabricate and install "portacabin" and portable toilets as required by our clients. We can also offer water services and sewage pulling and waste handling services for these facilities.

Sewage Transportation Services

We offer sewage pulling and transportation services throughout the Kingdom of Bahrain, on both a regular and call-out basis.

Equipment Design and Fabrication

Our Mechanical division is well equipped to design and fabricate any kind of sewage or water tankers, refuse compactors, skips and bins required by our clients.

Recycling Services

We are proud to announce that we have introduced a pioneering scrap tyre recycling facility in Bahrain. Our tyre crusher machine extracts the steel component from the tyre and then crushes the rubber into fine rubber powder, in the range of 30-80 mesh. This powder can be used to make value added products like synthetic surface track, mats, road declarations trips and asphalt mix for road construction.

We also have facilities for recycling other kinds of waste, including PET plastics, organic food, wood, plastic bags, electronic waste and paper and cardboard.

SPECTRUM Recycling Facility

Commercial / Industrial Waste sorting facility

Industrial liquid waste & oil treatment facility

Pet plastic recycling facility

Organic food waste recycling facility

Wood waste recycling facility

Paper & cardboard recycling facility

Plastic films (bags) recycling facility

Hazardous waste recycling facility
